

Be part of our autism research

The Autism CRC Australian Biobank

The aim of the **Australian Autism Biobank** is to collect detailed information on Australian children on the autism spectrum and their families. By understanding an individual's genetics, we aim to learn much more about the autism spectrum.

Biobank information will help us develop a national, standardised, accurate diagnostic protocol, enabling tailored support at the earliest possible age

Visit autismcrc.com.au/biobank for more information or contact:
